

Bioentech s.r.l.

<http://www.bioentech.it>

Bilateral Meetings

- Monday (04.30 pm - 06.30 pm)
- Tuesday (10.45 am - 01.45 pm)

Description

Bioentech is an innovative start-up that operates in the field of renewable energies and, particularly, of biomass. Bioentech aims to design, develop and commercialize products and technologies based on biological and thermochemical processes in order to create products and improve efficiency of biomass conversion processes. The main objective of Bioentech s.r.l. is the supply of technologies to be included in industrial and rural areas with the aim of producing finished goods and technologies based on biomass use. Bioentech has developed its specific business on producing and selling charcoal plants in Europe, identifying a significant potential to install these systems both at industrial sites as well as in forestry area, where the availability of local biomass make the technology very attractive. Another market that will be considered is the charcoal extra-EU market, where the demand of wood charcoal is increasing. Thus, in order to strengthen its position, Bioentech is also developing a simplified system to be installed in developing countries, where charcoal is still the main energy source.

Organization Type

Small or Medium Company,

Areas of Activities

Renewable Energy

Energy

Idea

Sustainable Charcoal production Plant

Cooperation project to install sustainable charcoal production plant, so to activate new supply chain and promote biomass sustainable management, local economy and development.
